Createspace Independent Publishing Platform, United States, 2016. Paperback. Book Condition: New. Illustrated. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.The term, Digital, refers to on-off conditions. Computer electronics is built on it. Cosmic electronics reflect the principle on a larger scale. The Primer Fields that focus interstellar plasma onto our Sun are dynamically formed and are subject to on-off conditions. Ice Ages result in the off periods. Without the Primer Fields, the Earth would be in an Ice Age environment. We, ourselves, would likely not exist then. The fields are created by magnetic effects of flowing plasma acting on itself. The phenomenon has been explored and replicated in laboratory experiments. The characteristics are presented in this book. A threshold level in plasma density must be exceeded for the fields to form. In times when the fields cannot form, or can no longer be maintained, the Sun is powered at a lower level. During the inactive state the solar activity is reduced to a type of cosmic default level with 70 less radiated energy. This has been the case for 85 of the last 2 million years. Ice Age Glaciation is the normal state on Earth, except for the brief active intervals of interglacial periods and the Dansgaard Oeschger oscillations during the Ice Ages. At the present rate of diminishment, the solar activity phase-shift threshold may be crossed in 30 years, or in the 2050s, most likely. With the primer system gone inactive, the climate on Earth will get 40 times colder than the Little Ice Age in the 1600s had been. Ice core evidence promises that. Without the needed preparations for human living in such an environment, 99 of humanity would die of starvation, both by the cold and by CO2 depletion as...
